

AHCI ASSIGNMENT 3

TOPIC: Cognitive walkthrough

Q1) A design team wants to evaluate whether a new mobile app is easy for first-time users to learn. They simulate user actions step-by-step and ask questions like: *“Will the user know what to do next?”*

Question:

Identify the evaluation technique and explain its process, advantages, and limitations.

TOPIC: Heuristic evaluation

Q2) A usability expert reviews an interface and checks whether it follows principles like consistency, feedback, and error prevention.

Question:

Explain heuristic evaluation and discuss its advantages and limitations.

TOPIC: Model Based Evaluation

Q3) A system designer uses mathematical and cognitive models to predict how long users will take to complete tasks without conducting real user testing.

Question:

Explain model-based evaluation and discuss its applications, advantages, and limitations.

Q4) Draw a table showing comparison among all methods mentioned above.
