

MUZAMMIL SIDDIQUI

Karachi, Pakistan

Email: k232001@nu.edu.pk | LinkedIn: linkedin.com/in/muzammilsiddiqui27 | GitHub: github.com/MuxammilSidd

Profile

Computer Science student with a strong interest in AI and software development. I like building practical projects and figuring things out through experimentation rather than just theory. Worked on projects involving Python, operating systems concepts, and basic machine learning workflows. Looking for an AI internship where I can contribute to real tasks, improve my coding habits, and learn how production AI systems are actually built.

Education

Bachelor of Science in Computer Science

FAST NUCES (Karachi)

Expected Graduation: 2027

Relevant Coursework: Artificial Intelligence, Data Structures, Operating Systems, Database Systems, Software Engineering, Analysis of Algorithms

Projects

AI Based Academic Performance Analysis App

Personal Project

- Built a React Native frontend for a student grade analysis app, improving my understanding of mobile UI structure and navigation flow
- Designed a plan to process student marks data and generate performance summaries, helping define how ML models could be applied later
- Explored Firebase backend integration to store academic data and manage authentication, gaining basic backend exposure
- Researched past paper patterns and syllabus structures to design a future recommendation system concept

Custom Video Editor (Operating Systems Project)

University Project

- Developed a basic video editor interface using Raylib and Raygui, improving understanding of GUI event handling
- Applied multithreading concepts to simulate concurrent media processing tasks, strengthening OS concepts in practice
- Organized UI into preview, timeline, explorer, and graph sections, improving layout design thinking
- Debugged rendering and synchronization issues during testing, reducing crashes during UI interaction

Genetic Algorithm Problem Solver (AI Lab Work)

University Lab

- Implemented genetic algorithm solutions in Python for optimization problems, improving understanding of search techniques
- Tested different mutation and crossover strategies to observe performance differences
- Used Jupyter Notebook to document results and compare outputs
- Refactored code after testing to improve readability and reduce unnecessary computations

Technical Skills

Programming: Python, C++, JavaScript

AI/ML: Scikit-Learn, data preprocessing, genetic algorithms

Tools: Git, Jupyter Notebook, Firebase (basic), VS Code

Concepts: Data structures, algorithms, object oriented programming, operating systems basics

Other: Debugging, documentation writing, problem solving

Experience & Activities

Self-Directed AI Learning

- Practiced Python problem solving regularly to improve logical thinking speed
- Studied basic ML topics such as classification and regression through small exercises
- Read documentation and tutorials when stuck instead of relying only on lectures
- Maintained project notes to track mistakes and fixes during development

Additional Information

- Strong curiosity about how AI systems actually work beyond tutorials
- Comfortable asking questions and learning from code reviews
- Interested in AI applications in education and productivity tools
- Available for internship and project based learning opportunities
