

National University of Computer and Emerging Sciences

Technical & Business Writing (SS2012)

Date: 18th, May, 2026

Course Instructors

Nazia Imam, Javeria Ali,
Madiha Rehman, Mariam Aftab

Final Examination

Total Time: 3 Hours

Total Marks: 90

Total Questions: 04

Semester: SP-2026

Campus: Karachi

Dept: CS

Student Name _____ Roll No _____ Section _____ Student Signature _____

CLO #2: Compose reports for effective performance in professional life.

Question 1-A: Select the correct option and write the option number in your copy: [9 marks]

1. Engro company has the budget for a project but lacks employees with required expertise. Which feasibility issue exists?

a) Technical Feasibility	b) Legal Feasibility
c) Economic Feasibility	d) Market Feasibility

2. Which of the following is the best recommendation when a project is not feasible?

a) Proceed anyway	b) Ignore the issues
c) Remove the conclusion section	d) Suggest modifications or reject the project

3. Xanders survey shows customers like food quality but report long waiting times during lunch hours. What should the recommendation focus on?

a) Improve food taste	b) Reduce menu items
c) Improve service speed during peak hours	d) Stop taking feedback

4. A survey for a new app LingQ shows 82% users prefer simple navigation, while only 18% prefer advanced tools. What should developers prioritize?

a) Simple and user-friendly design	b) Advanced features
c) Ignore survey results	d) Remove navigation options

5. A researcher uses only yes/no questions in a study about student learning preferences and data collected from 700 students. What is the main limitation?

a) Too many opinions collected	b) Data becomes too complex
c) Too many open-ended responses	d) Lack of detailed information

6. A student writes: "Our system will be very fast and user-friendly." Why is this sentence weak for a technical proposal?

a) It is too optimistic	b) It uses vague, non-measurable language instead of specific metrics
c) It is written in the past tense	d) It mentions users, who are not important in a technical proposal

7. A manager rejects a technical proposal saying: "You only showed me one solution. How do I know this is the best approach?" Which section did the student most likely write poorly or omit?

a) Deliverables & Success Criteria	b) Feasibility Analysis
c) Budget & Resources	d) Conclusion & Call to Action

National University of Computer and Emerging Sciences

8. Which document is written before a project starts, and which is written during a project?

a) Technical Proposal → before ; Progress Report → during	b) Progress Report → before ; Technical Proposal → during
c) Both are written before	d) Both are written after

9. Read the following excerpt from a technical proposal's Risk Section:

“We have never used WebSockets before, but we are confident we will figure it out. No major risks.”

Why is this section unprofessional?

a) It uses the word “we” too many times	b) It hides a real risk (lack of experience) behind false confidence and claims no major risks
c) It is too short	d) It mentions WebSockets, which is irrelevant for a proposal

Question 1-B: Read the data and conclusion taken from employee satisfaction survey report. After reading, write the introduction of the survey report in 80-100 words. [10 marks]

- 72% of employees reported satisfaction with the workplace environment.
- 62% employees believed communication between staff and management was effective.
- Four out of ten employees were dissatisfied with promotion opportunities.
- 48% employees stated that workload management needs improvement.
- Most employees preferred flexible working hours.

The report findings indicate that employees are generally satisfied with the workplace environment and communication practices within the organization. However, concerns regarding promotion opportunities and workload management require attention. The preference for flexible working hours also highlights the need for more adaptable workplace policies. Overall, the organization should focus on improving employee growth opportunities and work-life balance to enhance overall job satisfaction and productivity.

Rubric:

Problem + Purpose 6

Methodology (when and how you collected the data, population and sample size) 2

About the survey questionnaire 2

Question 1-C: You are given the following unordered bullet points from a junior developer's draft progress report on a “Database Migration to Cloud” project. These points are factually correct but poorly organized.

Read the bullet points and rearrange them in the right order that they should appear in a well-structured progress report. **Write only the options in your answer script without copying any sentences.** [5 marks]

Unordered Bullet Points:

- Encountered a 503 error during peak load testing; rollback script executed successfully.
- The project aims to move 500 GB of user data to AWS RDS with <1-hour downtime.
- Next week: schedule a second load test and update the firewall rules.
- Completed schema validation and migrated 80% of non-sensitive tables.
- Overall, the migration is on track for the March 15 deadline.

B...D.....C.....A.....E

Question 2: Your startup company has developed an AI-based Smart Traffic Management System designed to reduce traffic congestion, monitor vehicle flow, and improve emergency response time in crowded urban areas.

National University of Computer and Emerging Sciences

Although the city administration has not officially requested proposals, your company believes that the system can help solve increasing traffic problems in the city.

As a technical communication specialist, you have been asked to prepare an unsolicited technical proposal to the City Transport and Traffic Management Department, introducing your system and recommending its implementation at major traffic intersections across the city. **Write only the content asked in the question and make sure that you provide only the relevant technical information in every section.** [30 Marks]

Your proposal should include the following sections:

a. Background 4	b. Statement of Problem 5	c. Need 5	d. Benefits 4
e. Limitations 2	f. Scope 3	g. Proposed Plan 7	

Question 3: The following email is written in a professional context but in a quite unprofessional manner; correct the basic mistakes, following the SCOPE and rewrite the email: [15 marks]

Subject: leave

I NEED LEAVE.

I am writing this because from tomorrow maybe i will not come office because there is some family work and also i was not feeling good from few days and doctor also said take rest maybe 3 or 4 days but i will see. Also the API module is almost done but some things remaining and if Ali can check the code because yesterday github was also not working properly for me and I couldnt upload few files.

As everybody knows we are already working very hard on this project and deadlines are very difficult but i will try to respond on whatsapp if needed because client meeting was also discussed before. Kindly manage my tasks and if possible extend my task deadlines because i already completed many other tasks last week. also one more thing if salary can be processed before friday because i may travel to lahore for family issue.

Thanks
ahmed
developer

Subject: Request for Leave [2 marks]

Dear Mr. Ali: [2 marks]

I would like to request leave for the next 3–4 days starting tomorrow due to health concerns.

I have been sick since last week. I visited my doctor yesterday and got diagnosed with Malaria. My doctor has recommended me four days' rest for complete recovery.

I will remain available on WhatsApp for urgent communication, including any client meeting coordination if required. I also request adjustment or extension of my current task deadlines during my absence.

National University of Computer and Emerging Sciences

Thank you for your understanding. [email should start with the main idea.....3 marks+ should be about one issue.....2 marks+ SCOPE 2 marks]

Regards [2 marks]
Ahmed
Senior Developer

CLO #3: Design, develop, and document a research project.

Question 4-A: The following information for a technical report title page is disorganized. Arrange the details in the correct professional sequence and format them appropriately. [3 marks]

- | |
|---|
| <ul style="list-style-type: none">a. Department of Computer Science, FAST NUCESb. Prepared by Hina Tariq and Ayesha Noorc. Submitted to Dr. Sarah Ahmedd. May 18, 2026e. Associate Professor, Department of Computer Sciencef. Cybersecurity Risk Assessment of Cloud-Based Banking Applications |
|---|

F, C, E, B, A, D

Question 4-B: Read carefully the following conclusion from a research paper and write four recommendations based on it. [8 marks]

This study concludes that GPT tools have a substantial impact on the metacognitive skills of university students by influencing how they plan, monitor, regulate, and evaluate their learning processes. The findings indicate that AI-based tools assist students in organizing ideas, improving writing quality, clarifying difficult concepts, and receiving immediate feedback. These functions encourage learners to become more aware of their academic strengths and weaknesses, ultimately enhancing reflective and self-directed learning. Students using GPT tools demonstrated improved confidence in handling academic tasks such as research writing, brainstorming, and problem-solving.

The study further reveals that GPT tools strengthen self-monitoring skills by enabling students to review and revise their work more effectively. Learners became more capable of identifying errors, evaluating arguments, and refining assignments. In addition, AI technologies supported planning and time management by helping students structure tasks and set learning goals. Such features contributed positively to academic independence and autonomous learning.

Despite these advantages, the research also highlights important concerns regarding overdependence on AI technologies. Some students relied heavily on GPT-generated responses without critically analyzing or verifying the information provided. These reduced opportunities for independent thinking and deep cognitive engagement. The study found that students with stronger digital literacy skills benefited more effectively because they were better able to evaluate AI-generated content critically.

Overall, the study concludes that GPT tools can positively enhance metacognitive development when used responsibly and under proper academic guidance. However, excessive and uncritical dependence on AI may weaken students' analytical and reflective abilities.

National University of Computer and Emerging Sciences

Question 4-C: In research writing, the Discussion section explains and interprets the findings of a study using different discussion strategies. These strategies may include explaining reasons for results, discussing limitations, comparing findings, drawing inferences, evaluating significance, or relating findings to previous studies. Read the following scenarios carefully and identify the discussion strategy used in each case. Match each scenario with the correct strategy from the list below. **Make sure that you write in your copy only the alphabet written for every strategy to answer for every provided scenario.** [10 Marks]

Scenarios	Discussion Strategies
i. The improvement in students' writing performance may have occurred because the AI-based feedback provided immediate correction and personalized suggestions.	a. Explaining the reason for the result
ii. Students showed higher engagement during online collaborative tasks conducted during the COVID-19 semester when remote learning became compulsory.	b. Discussing limitations influencing the result
iii. Although both male and female students improved their scores, female students demonstrated greater consistency in reflective learning practices.	c. Explaining the circumstance or context
iv. The results suggest that regular use of GPT tools may encourage students to become more independent learners over time.	d. Comparing two results to highlight an aspect
v. The increase in participation rates indicates that AI-assisted classroom activities can positively influence collaborative learning environments.	e. Comparing findings with previous studies
vi. The low response rate may have affected the reliability of the questionnaire data collected during the final phase of the research.	f. Inferring meaning from the results
vii. Students performed better in project-based tasks because they had access to real-time automated feedback throughout the semester.	g. Evaluating the significance or implication of the result
viii. Unlike previous semesters, students in this study had access to high-speed internet and digital libraries, which may have influenced their learning experience.	
ix. The experimental group achieved significantly higher scores than the control group, particularly in critical thinking tasks.	
x. These findings contradict earlier research by Ahmed et al., which reported that AI tools reduced student engagement in academic writing[1].
