

Tasksheet Week 14 Day 3

Task I: Identify the types of proposal [all applicable types: Request (Solicited / Unsolicited), Audience (Internal / External), Formality (Formal / Informal), Purpose (Planning / Research Grant / Sales) as per the scenario]

Scenario	Type(s)
1. A university invites companies to submit proposals for developing a Learning Management System (LMS).	
2. A student develops a mobile app and sends a proposal to the university administration suggesting its adoption.	
3. An IT department proposes upgrading lab computers to the university management.	
4. A startup submits a detailed document offering its cloud services to a bank after receiving a formal request.	
5. A researcher submits a proposal to a funding agency to study AI in healthcare.	
6. An employee sends a short email suggesting a small software improvement to their manager.	
7. A company proposes its cybersecurity solution to a government organization without being asked.	
8. A project manager submits a document explaining how a software project will be completed, including timeline and resources.	

Task II: Read the sections of a technical proposal below and identify each paragraph with the correct section:

	Technical Proposal	
	Project Title: Solar-Powered Charging Stations for Public Parks	
1	This proposal focuses on the installation of portable solar-powered charging stations in major public parks across the city. It covers the deployment, basic maintenance, and operational use of the units. However, it does not include large-scale energy storage systems or expansion to non-park locations.	
2	There is a clear need for an eco-friendly and accessible charging solution that supports the increasing use of mobile devices while aligning with sustainable energy goals. Implementing such a system would enhance user experience and promote the adoption of green technology in public spaces.	
3	Public parks in the city serve as important recreational spaces where citizens engage in leisure, exercise, and social activities. With the increasing reliance on mobile devices for communication, navigation, and digital services, access to charging facilities has become a growing necessity in public areas. However, most parks currently lack sustainable and accessible charging infrastructure.	
4	Solar-powered charging stations to be installed in selected high-traffic public parks as a pilot project. Each unit will be capable of charging up to 10 devices simultaneously and will be strategically placed near seating areas for accessibility. The implementation will involve site assessment, procurement, installation, and periodic maintenance. Based on the success of the pilot phase, the project can be expanded to additional parks across the city.	
5	The absence of charging stations in public parks creates inconvenience for visitors, particularly during extended stays. Users are often unable to recharge their devices, which limits their ability to stay connected, access emergency services, or use digital applications effectively.	
6	The proposed solar-powered charging stations offer multiple benefits. They provide a renewable energy-based solution, reducing reliance on conventional electricity. The stations enhance public convenience by allowing multiple users to charge devices simultaneously. Additionally, they promote environmental awareness and position the city as a supporter of sustainable innovation.	
7	Despite its advantages, the system may face certain limitations, such as high initial installation costs and dependency on sunlight availability. Maintenance requirements and potential misuse or vandalism in public areas may also present challenges.	

Task III: Choose anyone scenario from the following to write a technical proposal. Include all the discussed headings.

1. AI-Based Traffic Management System

You are part of a tech startup that has developed an AI-based traffic management system that uses real-time data to optimize traffic signals and reduce congestion. The system can analyze traffic flow and adjust signal timings automatically.

Write a technical proposal to the City Traffic Management Authority, recommending the implementation of this system in major intersections.

2. Smart Attendance System Using Facial Recognition

You and your team have developed a facial recognition-based attendance system that automates student attendance with high accuracy. The system reduces manual errors and saves time for instructors.

Write a technical proposal to your university administration, proposing the adoption of this system across departments.

3. Predictive Analytics for Student Performance

Your company has created a predictive analytics tool that analyzes student data to identify at-risk students and improve academic outcomes.

Write a technical proposal to the Higher Education Commission, recommending the implementation of this system in universities.

4. Cybersecurity Threat Detection System

You are part of a cybersecurity firm that has developed a real-time threat detection system capable of identifying and preventing cyberattacks using AI algorithms.

Write a technical proposal to a national banking network, suggesting the adoption of this system to enhance digital security.

5. Cloud-Based Data Storage Solution

Your startup offers a secure and scalable cloud-based storage solution that allows organizations to store and access data efficiently.

Write a technical proposal to a government department, recommending migration from traditional storage systems to your cloud solution.

6. Smart Waste Management System

You have developed a smart waste management system that uses IoT sensors to monitor garbage levels and optimize collection routes.

Write a technical proposal to the Municipal Corporation, proposing the implementation of this system in the city.

7. AI Chatbot for Student Support Services

Your team has designed an AI-powered chatbot that can handle student queries related to admissions, courses, and campus services 24/7.

Write a technical proposal to a university, recommending the deployment of this chatbot.

8. Blockchain-Based Academic Record System

You have developed a blockchain-based system for securely storing and verifying academic records, reducing the risk of fraud.

Write a technical proposal to the Ministry of Education, suggesting the adoption of this system nationwide.

9. Campus Navigation App

You have created a mobile app that helps new students navigate campus buildings, classrooms, and offices.

Write a technical proposal to your university to implement this app.

10. Internship & Job Matching Portal

You have developed a platform that matches students with internships based on their skills, courses, and interests.

Write a technical proposal to your university career services department recommending this platform.
