

Tasksheet Week 14 Day 1

Task: Read the sections of a feasibility report below and identify each paragraph with the correct section:

	FEASIBILITY ANALYSIS REPORT	
	Project Title: Construction of a New Urban Hotel Facility	
1	⇒ Planning & Design: 6 months ⇒ Permits & Approvals: 4–6 months ⇒ Construction Phase: 24 months ⇒ Interior Setup & Training: 6 months ⇒ Total Duration: ~3 years	
2	The project is feasible across all five key dimensions. While financial investment and regulatory approvals present challenges, the long-term benefits and market demand justify proceeding with the project. It is recommended to proceed with the project, ensuring careful financial planning, timely approvals, and effective project management to minimize risks.	
3	⇒ Modern high-rise construction using energy-efficient design ⇒ Reliable infrastructure for water, electricity, and waste management ⇒ Safety systems including fire protection and emergency exits ⇒ Integration of smart hotel technologies	
4	The proposed solution is to construct a modern hotel equipped with advanced amenities, conference facilities, and high-quality services. The project aims to meet increasing demand and enhance the hospitality infrastructure in the area.	
5	⇒ Estimated Cost: \$50 million ⇒ Funding Sources: Bank loans, investors, incentives ⇒ Projected Revenue: \$15 million annually ⇒ Break-even Point: Approximately 5 years ⇒ Operational Costs: Salaries, utilities, maintenance	
6	⇒ Implementation of hotel management systems ⇒ Established supply chains for operational needs ⇒ Skilled staffing and management structure ⇒ Customer service strategies for continuous operations	
7	This report evaluates the feasibility of constructing a new hotel building in a prime urban location. The project aims to provide high-end hospitality services and generate sustainable revenue. The feasibility analysis focuses on technical, economic, operational, legal, and schedule aspects. The findings indicate that the project is feasible, with strong financial potential and manageable risks related to regulations and timelines.	
8	⇒ Compliance with zoning laws and building regulations ⇒ Required permits and approvals from authorities ⇒ Adherence to health, safety, and environmental standards	
9	⇒ Land acquisition in a prime urban location ⇒ Construction materials (concrete, steel, glass) ⇒ Skilled workforce (architects, engineers, contractors) ⇒ Technology systems (HVAC, elevators, IT infrastructure) ⇒ Furniture, fixtures, and operational staff	
10	There is a growing demand for premium accommodation in urban areas, but existing facilities are insufficient to meet the needs of business travelers and tourists. This gap limits potential revenue opportunities and affects customer satisfaction.
