CLO #1: Utilize efficient writing style for producing an effective technical document.

Question 1 A: Identify the genre of writing: Academic, creative, journalistic, technical.

Write one sentence reason to justify your answer [6 marks]

- a. The annual National Software Engineering Competition 2025 concluded with groundbreaking innovations from university teams across Pakistan. Students presented AI-driven solutions, cybersecurity tools, and fintech applications. The winning team from FAST-NUCES impressed judges with an intelligent fraud detection system. Experts praised the event for fostering industry-academia collaboration and encouraging tech-driven entrepreneurship.
- b. The silent hum of servers, the flickering lines of code, and the intricate dance of algorithms—all work tirelessly behind the scenes of modern banking. Every time a customer swipes a card, an invisible army of encryption, machine learning, and cybersecurity shields their money from fraudsters. In this digital age, banks are no longer just vaults of money but fortresses of data.
- c. Modern banking systems integrate cryptographic protocols, machine learning models, and real-time processing frameworks to secure transactions and optimize operations. Banks utilize API-based architectures for interoperability, while blockchain technology enhances transparency. Additionally, cloud computing supports scalable banking services, and AI-driven fraud detection algorithms analyze transaction patterns to mitigate cyber threats effectively.

Question 1B: Your company has experienced a phishing attack where several employees unknowingly clicked on a fraudulent email link. As an IT security specialist, you need to take immediate action to mitigate the damage and prevent future attacks. [2+2+2= 6 marks]

National University of Computer and Emerging Sciences

Task:

Write content for a professional email (100-150 words) to all employees informing them about the incident. This email must follow SCOPE. In this email you should:

- Briefly explain the phishing attack.
- Provide clear immediate actions employees must take (e.g., changing passwords, reporting suspicious emails).
- Offer preventive measures to avoid future phishing scams.
- Maintain a professional and reassuring tone while emphasizing urgency.

Question 1C: Apply SCOPE to correct the following: [4 marks]

1. The utilization of the aforementioned algorithm results in a significant reduction in the amount of time required for the completion of the task. **(Economy and clarity)**
2. The software is very fast and efficient. **(Clarity)**
3. I believe this is the best programming language because it's easy to use and has lots of features. **(Objectivity and clarity)**
4. Automation technology, which is truly revolutionary and absolutely essential in today's fast-paced world, has amazingly transformed industries by effortlessly taking over repetitive and boring tasks, thereby allowing workers to focus on much more interesting and valuable activities that contribute greatly to overall business success. **(Objectivity and Precision)**

Question 1D: Read the following scenarios and choose the accurate statement. [2 marks]

Scenario 1.	Scenario 2.
You are documenting a new feature in a software application. Which approach is best for explaining the feature?	Your team developed an AI model, and you need to document its Application Programming Interface for external developers. What should you include?
A) Write a long paragraph explaining the entire process B) Use numbered steps, diagrams, and short descriptions C) Include technical jargon without explanation D) Assume the reader already understands everything	A) Model accuracy and history of development B) Detailed installation steps and usage examples C) Company background and press releases D) User testimonials and reviews

Question 1E: Match each document type with its correct purpose. There is only one purpose for each document type. [3 marks]

Document Type	Purpose
1. User Manual	A. Provides an overview of programming languages
2. Application Programming Interface documentation	B. Guides end-users on how to use a product
3. Software Requirement Specification	C. Explains API functions and how to integrate them

National University of Computer and Emerging Sciences

4. Technical Report	D. Helps troubleshoot common issues in a product
5. Troubleshooting Guide	E. Presents research findings or analysis on a technical topic
6. Programming Guide	F. Defines the system's technical and functional requirements

CLO #4: Displays the internationally accepted standards of technical communication.

Q2: Write a definitional paragraph on the topic “Cloud Computing”. Imagine that you have collected the following information on this topic. Analyze the information, extract relevant points, synthesize and write the key points in your own words. Also, mention the sources of information. You do not need to add any information of your own and the word limit is 150-200 words. [9 marks]

- Use all three techniques: **summarization, paraphrasing, and quotation.**
- Include **citations.**

Sources:

1. Cloud computing refers to the delivery of computing services—including storage, processing power, and networking—over the internet. It eliminates the need for businesses and individuals to maintain physical hardware by providing on-demand access to remote servers.
2. Cloud services are categorized into three main models: Infrastructure as a Service (IaaS), Platform as a Service (PaaS), and Software as a Service (SaaS). “IaaS provides virtualized computing resources, PaaS offers a development environment, and SaaS delivers software applications over the internet.”
3. Cloud computing enhances flexibility, scalability, and cost-effectiveness. Companies use cloud solutions for data storage, machine learning, and application deployment. Security concerns such as data breaches and unauthorized access remain key challenges.
4. Businesses and individuals rely on cloud computing for everyday tasks. For example, “Google Drive, Dropbox, and Microsoft Azure are widely used cloud platforms that allow users to store, access, and share data from any location.”
5. Cloud computing refers to the delivery of computing services, including storage, processing, and networking, over the internet rather than relying on local servers or personal devices. It is essential for individuals and businesses as it enables remote access to data, enhances collaboration, reduces infrastructure costs, and ensures data security and scalability, making digital operations more efficient and accessible.
6. Cloud computing refers to the on-demand availability of computing resources, such as data storage, servers, networking capabilities, and software, over the internet. This model allows users to access and utilize these resources without the need for direct active management or ownership of the physical infrastructure.
7. One of the primary advantages of cloud computing is its cost-effectiveness. Users only pay for the resources they use, following a pay-as-you-go model. This reduces capital expenditures on physical infrastructure and allows businesses to scale resources up or down based on demand.
